Brand Evolution Updates

01 **Updated and expanded color palette**
The color palette remains within the same hues, but with increased vibrance and saturation.

02 **Color usage**
Outlining specific tints and shades to the existing color palette provides a breadth of options for composition while maintaining consistency across the brand.

03 **Graphics**
Glyphs work to both add visual interest and support content and key messaging. Glyphs should be used purposefully in telling the visual story.

04 **Invite Movement**
Interesting glyph compositions, whether static or animated, create a feeling of movement and heightened energy. Shifting the color applications to invite more contrast achieves a similar effect.

Brand Principles

Transformative
Change is our constant as Alkami grows and evolves to shape and define the future of finance. Visuals should nod to transformation and forward movement.

Bold
Alkami takes bold actions and explores big, daring ideas that push boundaries and create impact. The color and usage of glyphs enforces that boldness and presence in our space.

Pioneering
Alkami is a creative force that is led by the pioneering spirits of discovery, curiosity, and inventiveness. This is represented visually with the application of glyphs and lively compositions.

Your catalyst for **digital banking transformation.**

Logo

Alkami Logo

Primary Logo

The primary logo should be used in Alkami business materials, marketing collateral, and promotional materials to create immediate and consistent brand recognition. Primary one-color logos, navy and white, may also be used over colored backgrounds, photography, or to achieve the proper balance of color within a layout or composition.

Secondary Logo

The secondary logo may be used as a design element in Alkami business materials, marketing collateral, and promotional materials in situations when the Alkami name or primary logo is communicated elsewhere (like on the back of the note card or the inside of the pocket folder) and/or when the audience is already familiar with Alkami.

Proper Usage

Never modify the logo in any way. Never alter, embellish, or attempt to recreate the logo. Don’t change the color or alter the proportions.

Preserve clear space

To preserve the integrity of the Alkami logo, always maintain a minimum clear space around the logo. The clear space insulates the logo from other visual elements.

Use half the width of the “A” in the logo as minimum clear space surrounding logo.

Maintain Proportions

Tip: hold the “Shift” key to maintain the proportions while scaling up or down to avoid squishing or stretching.

Proper Contrast

Always make sure the logo is used on a background providing ample contrast to ensure readability. The one-color logo (navy and white) may also be used to achieve the proper contrast.

Color System

Palette Expansion

Color values

The Alkami color palette is a strong part of the brand identity. The base color palette has been upgraded to add saturation and vibrancy to each value. These updates reflect the bold energy and impact Alkami is known for.

The palette has been extended with the addition of tints. This provides more options for accent colors, highlights, contrast, and complementary graphics. The Alkami navy is still the hero, and should be used with the expanded tints and shades.

Color Palette

The Alkami primary colors are the navy blue with corresponding tints and shades, along with white. This is a shift from gold acting as one of the primary colors. Instead, gold acts as an accent and should be used less frequently and more intentionally in design and composition.

Usage & Proportions

Compositions

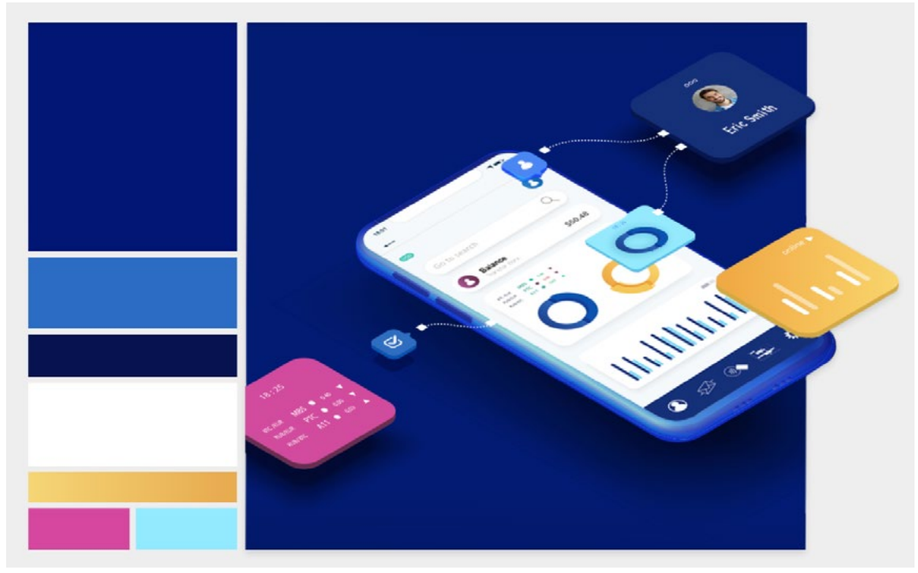

The primary blue color remains prominent in usage, with its tints and shades applied to neighboring graphics. This allows for visual interest without being too distracting. The secondary palette is represented with the dash of gold in the logo and button accents.

Usage & Proportions

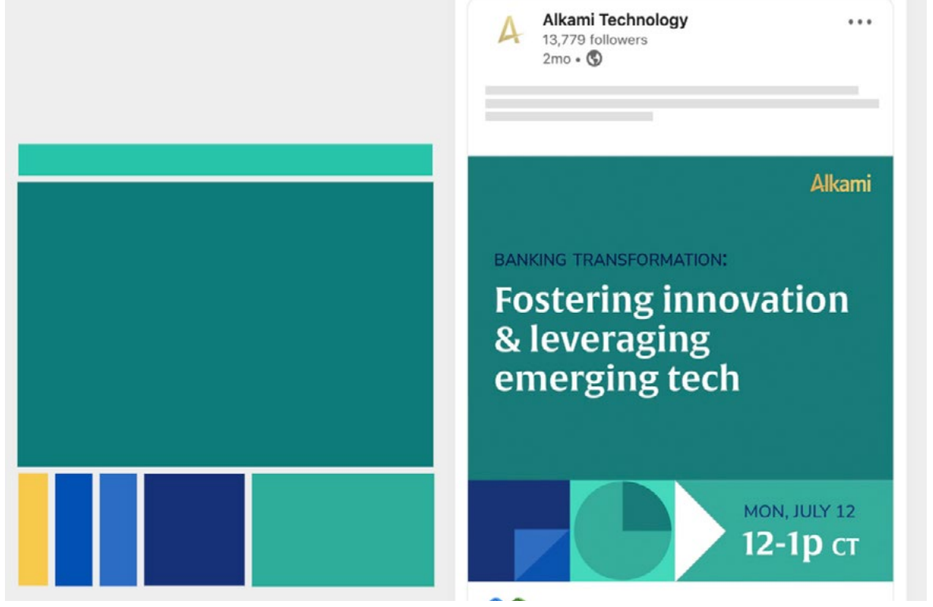

Stand-alone graphics

The primary blue color remains prominent in usage for product graphics. More secondary colors like purple and turquoise are introduced, but remain minimal in the overall color ratio. The gold gradient is used as a highlight and creates emphasis within the composition.

Social

For more fleeting content, like event graphics and social, secondary colors can be used in greater proportions. In this example, tints and shades of the secondary turquoise are used for graphics, with a splash of gold and presence of the primary blue to create a tie to more lasting brand materials.

Glyphs

Overview

Glyphs are built based on geometric shapes in a grid system. Glyphs can break the grid internally, as seen in the purple arrow. Alignment is key in combining glyphs to create greater visual meaning.

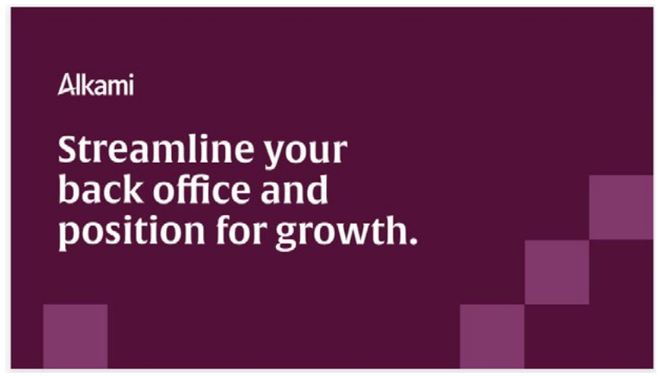

Tints and shades work well to show differentiation between shapes while keeping graphics clean. We've found that adding pops of color to complement the primary hues adds visual interest and variety.

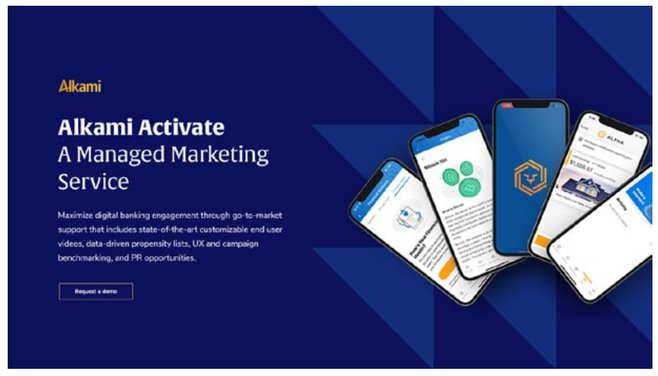

Primary Use

Glyphs should primarily be used with a two-toned color palette in a simple, purposeful composition. The glyph(s) should reinforce the content and messaging, but shouldn't be too literal.

Secondary Use

Pattern

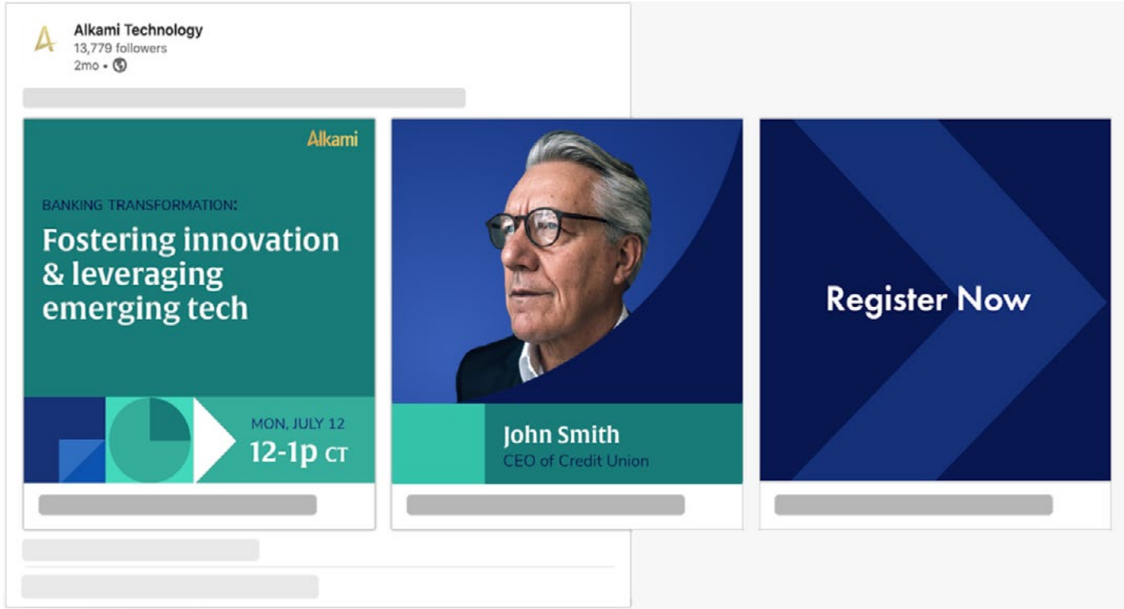

Multiple glyphs can be combined to form a pattern.

The pattern should reinforce the messaging, create emphasis, as well as evoke movement and transformation. Colors should be combined, however limiting the palette helps to keep the compositions from getting too busy. The patterns can incorporate typography, photography, and messaging where appropriate.

Putting It All Together

Abstract glyph treatment, paired with an intentional pattern and integrated with photography shows how the graphic system can work together. This allows for variety while still maintaining an overall system.

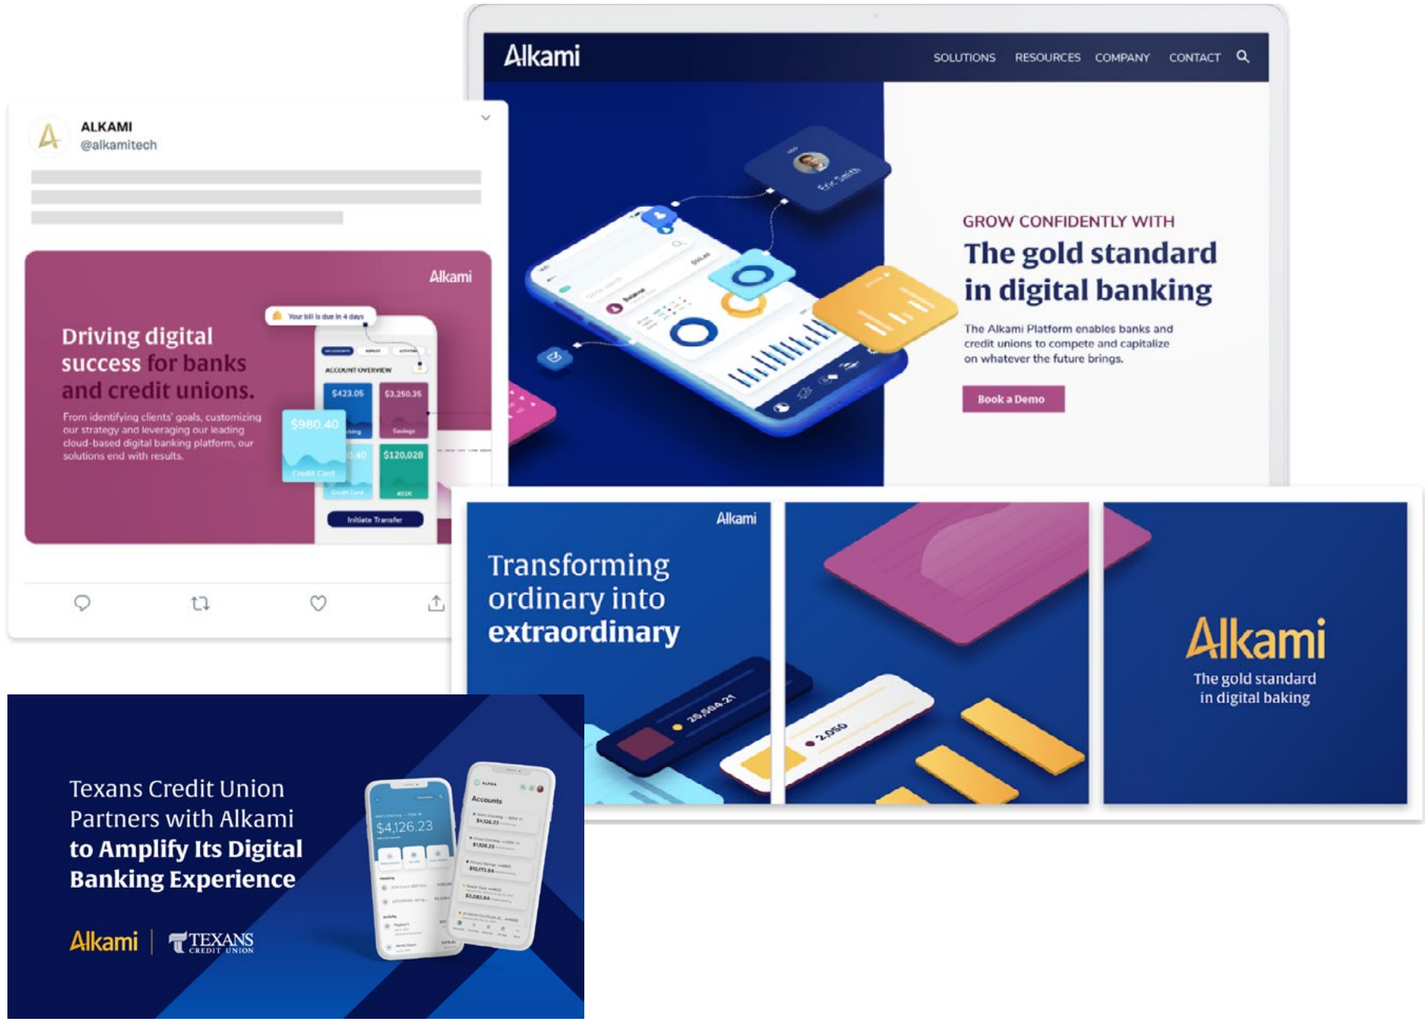

Product Display

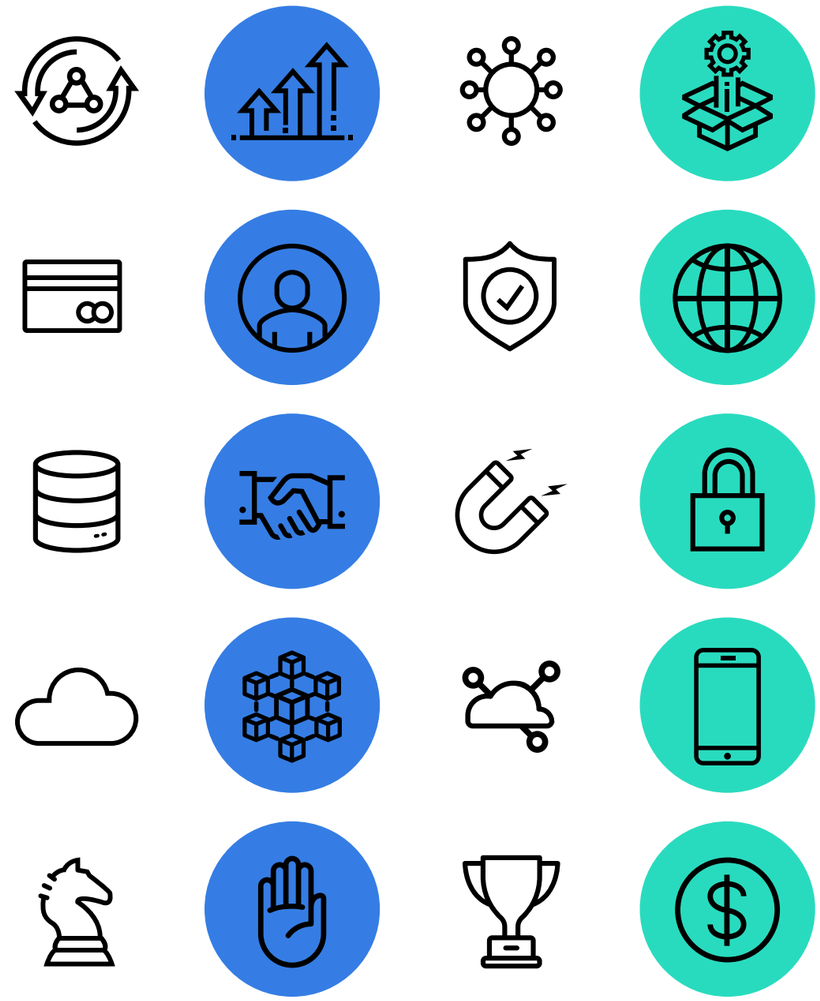

UI can be represented abstractly through 3D shapes and simplified elements. This can be done isometrically or flat, as long as there are layering effects of highlighted interaction.

Use minimal device mockups when showcasing the product such as ‘clay’ mockups. The lighter colors and generic frames provide excellent contrast against the brand palette and allow the product to shine.

Icons

Always use line icons to maintain a unified style. Be sure the stroke and line weight is consistent when using icons sets. Apply holding shapes to add pops of color in layout.

Typography

Aa

Alverata

Use Alverata for display and headline copy.

This contemporary, eclectic font family performs beautifully in both digital and physical applications, delivering excellent openness and legibility in small text and proving lively and attractive at large sizes.

Alverata was chosen for its distinct personality and to stand out from competitors in our space.

Type Hierarchy

Use Alverata for display and headline copy - bold and semibold weights work well for this application.

Nunito Sans regular should be used in most cases for body copy.

Google and Microsoft Applications

For use across all Google and Microsoft applications, substitute Cambria for headlines and Calibri for body copy.

06

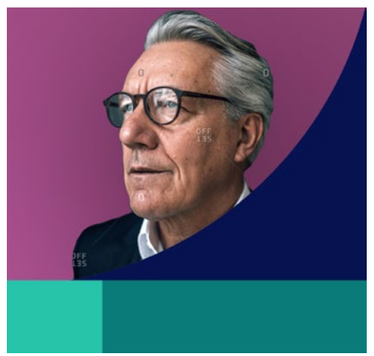

Photography

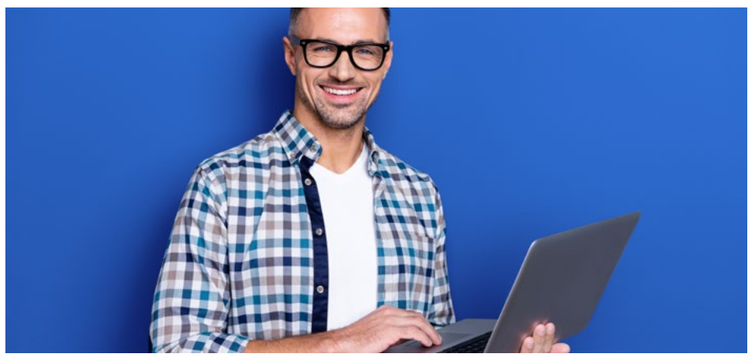

Color Blocked Imagery

Look for opportunities to bring the vibrancy of the brand palette into photography to make them feel uniquely Alkami in their use. Color blocking can also make device shots feel modern and energetic.

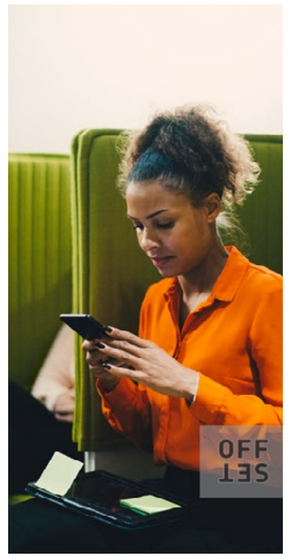

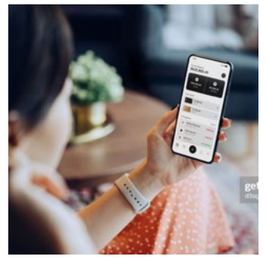

Contextual Device Imagery

Show people using their devices in visually interesting environments. The brand palette may still be applied to elements within the photo like clothing or furniture when applicable. Avoid stale or forced looking poses.

Messaging

The Hero’s Journey

Message matters. If we haven’t clarified our message, our clients won’t listen. And, since the beginning of communication, stories have helped the human brain understand complex, important, and/or urgent messages.

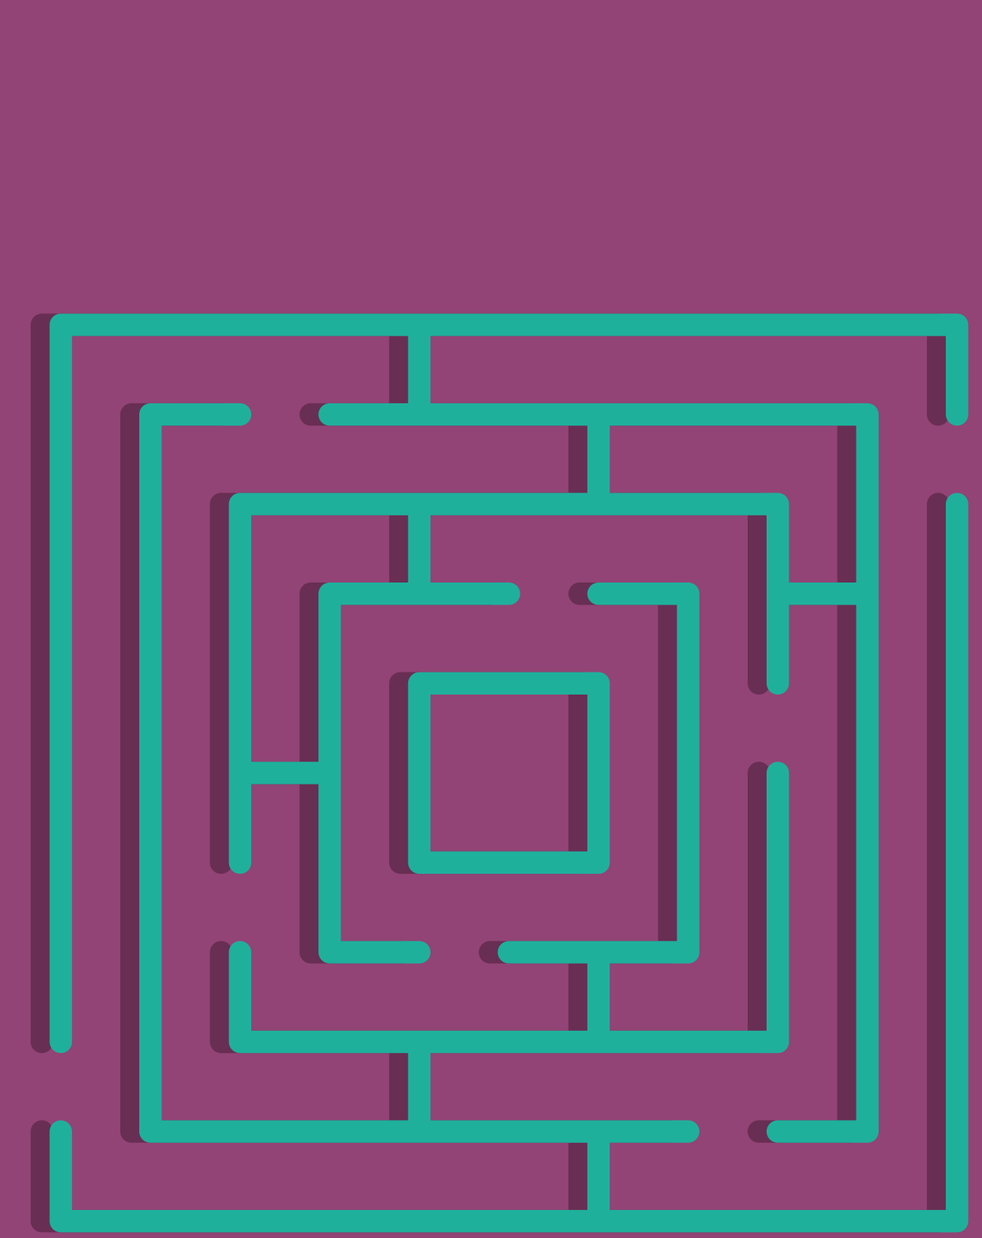

That’s where an effective company narrative comes in.

Taking the time-tested principles of storytelling, our company narrative must reveal:

- The hero
- What the hero wants
- Who the hero must defeat to get what they want
- What tragic thing will happen if the hero doesn’t win
- What wonderful thing will happen if they do

Most importantly, as there is room for only one in most stories, we must be clear that **our client is the hero**. In our story, Alkami is the trusted, authoritative guide that helps our hero fulfill their purpose.

We tell our stories from the only perspective that matters—our client’s. It’s the enduring reminder of why we do what we do in service to helping our clients get what they want. They inspire us to be our best each day.

Tone of Voice

Our voice and tone defines who we are, how we sound and the rules in which we interact with the world around us.

Alkami has a voice that puts businesses at ease. Resonating with confidence, proficiency and overall calm & collected, it often catches them off guard. It's not very often that a bank or credit union can be put at ease. Then again, Alkami isn't your typical digital banking software. The voice of Alkami is Intentional, Proficient, Honest. Helpful and Plucky.

Intentional
Less is much more. It's not about being refined. It's about being deliberate. We make it a point to say only what needs to be said. ~~Everything else just isn't necessary.~~

Do: Be concise. Get to the point.
Don't: Beat around the bush. Be obnoxious. Put out fluffy, scripted, formulaic language.

Proficient
Sometimes the way something is said to you can instantly give you peace of mind. It's spoken with experience, confidence and a degree of certainty that gives you permission to let down your guard and trust the process. This isn't our first rodeo. We know what we're doing.

Do: Be user-friendly. Be informative, calculated and engaging. Have some substance to what you're saying. Know what you're talking about.
Don't: Use marketing jargon in place of facts. Don't use filler words or sound like a n00b.

Honest
The truth can speak volumes. And when Alkami says something, we really mean it. We never guess. Every answer we give is backed by data. You can trust we will never tell you what you want to hear – we will only tell you what you need to know.

Do: Smile in your language. Structure sentences in a sure, optimistic manner. Be transparent.
Don't: Bury the lead. Don't use "sell, limited time" language.

Helpful
It's not about us, it's about you. So, don't expect a lot of chest-pounding from us. We have IG for that. Our philosophy is - the more time we spend talking about who we are and what we can do, the less time we get to spend creating products and solutions (you know, the things you actually care about).

Do: Be proactive, compassionate and understanding. Then, offer solutions.
Don't: Use "We this", or "We that". No need for excessive horn tooting.

Plucky
When you believe you're always fighting outside your weight class, something amazing happens. You become less intimidated by the challenge in front of you. You're confident. You realize, when you ensure every punch counts, others are less likely to mess with you. Everything becomes a little more fun when you're not afraid to live fearlessly.

Do: Be confident. Have a position. Have a little swagger. Be unapologetic.
Don't: Be cocky. Be passive. Be boastful.
